

Aerospace 2017

This conference experience, structured with multiple opportunities to network, will provide members with tailored programs specifically for the aerospace community and ones that can easily fit into today's busy schedules.

Join WIA for in-depth discussion on the latest technological innovations to drive next generation capabilities as they are being pursued by the government and industry.

Entrepreneurship: Revolutionizing National Security Operations

June 1, 2017

Advances in technology and increased reliance on information technology are changing our way of life and the “art of the possible” in the conduct of our Government’s national security missions. From the Internet of Things and big data, to artificial intelligence, new threats to US space assets, and semi-autonomous weapons systems, the world in which military and intelligence operations will be conducted will change profoundly. The Government’s pressing need to take advantage of private sector/venture capital investments to retain our technical superiority has spawned new mechanisms—DIUx, SCO—to find solutions, fail fast and accelerate incorporation of capability that can change the game.

In this session, thought leaders from the government and the private sector will explore key technology advances, their impact on military and intelligence missions, and strategies to move ideas to operational capability.

Location

Residence Inn Marriott Arlington Pentagon City
550 Army Navy Drive, Arlington, VA 22202
1:30 pm to 5:30 pm
